

# Conceptual Data Model

## 20bcs083

Question 4:

Every entity described in this ER-Diagram has a primary key. Even in the enrolment table, where it seems as though there is no primary key, the foreign key is in fact registered as a primary key. Hence, there are no weak entities in this diagram.

Question 5:

Data redundancy refers to repetition of unnecessary data in a database. This model that has been created does not display any data redundancy, as all the data is important.
